The Port Jefferson Free Library is committed to offering community access to emerging technologies. By providing access to 3D printing services, the Library intends to motivate experimentation, creativity, and an interest in design.

Printing is available to all those holding a valid Suffolk County library card in good standing.
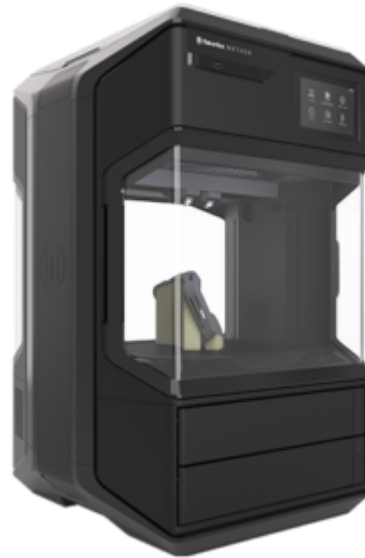

Cost: $1 per hour.

Programs are offered periodically for all age groups.

3D Print Service
at Port Jeff Library

portjefflibrary.org/3Dprinter

Step 1: Create or Obtain a File	Step 2: Format your File	Step 3: Submit your File to Print

Looking for a model that already exists?

Search an open source website such as Thingiverse or 3D Warehouse.

Looking to design your own model?

3D Computer Generated software can be free, open source, and browser-based. Try Tinkercad, Blender, or OpenSCAD.

Check your design for holes, gaps, or other problems before submission.

Consider the density of the object and note that increasing density increases time and the cost.

If your model includes multiple parts, export each part as a separate STL file.

Maximum size is 304.8 x 304.8 x 304.8 mm (12 x 12 x 12 in).

Once your model is ready to go, submit your file through our 3D Printed Object Request Form from:

portjefflibrary.org/3Dprintrequest

A staff member from the Library will contact you within five business days to go over any necessary details and to give you an estimate for the total cost (**$1 per hour**) and estimated print time.
